

**AIM STATEMENT:** University Hospitals Seidman Cancer Center partnering with the Centers for Families and Children aim to provide screening mammography to 40 women by December 31, 2021. This is important post pandemic because COVID 19 has dropped screening rates dramatically in all populations. Our project is targeted to women who are personally hesitant or resistant to cancer screenings by reducing barriers by creating opportunity and building trust through culturally sensitive navigation to screening services.

**VISION STATEMENT:** By streamlining our process and increasing collaboration we will achieve increased screening mammography to women of color over the age of 40 residing in the Cleveland Metropolitan area served by our partnering FQHC.

### Evidence Based Intervention 1: Patient Education

- Determine the information to be shared with patients
- Create and modify a patient survey
- Share educational materials with FQHC partner
- Pack gift bags, clip boards, pens, surveys for day of event, and water

### Evidence Based Intervention 2: Professional Education

- Provider and staff training
- Process Mapping- general referral process as well as project specific mapping
- Program Evaluation and QI work. Mini staff survey after each event, with a comprehensive staff survey at the end of the year.

### Evidence Based Intervention 3: Reduce Barriers

- Reducing out of pocket costs. Revisiting BCCP (Breast and Cervical Cancer Program) process.
- Location- bringing the screening to the FQHC, location is accessible by all transportation options (train, bus, in the community).
- Access (day and time)- we are open to changing the day to a weekend for ease of access
- Child care when patients are receiving screening in the mobile unit (future solutions)
